Composed of some of the world's most skilled hackers and security experts, the Seal Redemption Team is tasked with protecting Oracle's vast network of servers, databases, and applications from a wide array of cyber threats, including:

- Malware and ransomware attacks
- Phishing attempts
- SQL injection attacks

- DDoS attacks
- Zero-day exploits

The team's mission is to not only respond to cyber attacks, but to anticipate and prevent them before they can cause significant damage.

Tactics and Tools

The Seal Redemption Team employs a wide range of tactics and tools to protect Oracle's systems, including:

- Penetration testing: The team regularly conducts penetration tests to identify vulnerabilities in Oracle's systems and applications.
- Vulnerability management: The team tracks and mitigates
 vulnerabilities in Oracle's systems and applications, ensuring that they
 are always up-to-date with the latest security patches.
- Threat intelligence: The team gathers and analyzes threat intelligence from a variety of sources to stay informed about the latest cyber threats and trends.
- Incident response: The team is responsible for responding to cyber security incidents and coordinating with Oracle's other security teams to mitigate the impact of attacks.

The team also uses a variety of specialized tools to enhance their security capabilities, including:

 Firewalls: The team uses firewalls to block unauthorized access to Oracle's systems and applications.

- Intrusion detection systems: The team uses intrusion detection systems to detect and alert on suspicious activity on Oracle's networks.
- Anti-malware software: The team uses anti-malware software to protect Oracle's systems from malware and ransomware attacks.
- Security information and event management (SIEM) systems: The team uses SIEM systems to collect and analyze security logs from Oracle's systems and applications.

The High-Stakes World of Cyber Security

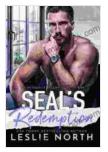

The world of cyber security is constantly evolving, with new threats emerging all the time. The Seal Redemption Team must constantly adapt to stay ahead of these threats and protect Oracle's systems and data.

The team's work is critical to Oracle's success. Oracle's customers rely on the company's systems and applications to run their businesses, and the Seal Redemption Team ensures that these systems and applications are secure and reliable.

The team's work is also important for the security of the wider internet.

Oracle's systems and applications are used by millions of people around the world, and the team's work helps to protect these users from cyber attacks.

The Seal Redemption Team is an elite cyber security force that plays a vital role in protecting Oracle's systems and data. The team's work is critical to Oracle's success and the security of the wider internet.
